

Adolescent sexual health issues, like teen pregnancy and sexually transmitted infections (STIs), must be addressed with complex prevention efforts including comprehensive sexuality educations that is developmentally appropriate for all ages throughout the educational experience. Comprehensive sexuality education includes medically accurate and developmentally appropriate information on abstinence and contraception.

Comprehensive Sexuality Education Works

- Research shows that comprehensive sexuality education is effective in providing adolescents with the tools, knowledge, skills, attitude and values to make responsible choices about their sexual health.¹
- Comprehensive sexuality education programs that discuss both abstinence and contraception, including condoms, do not increase sexual activity among teens; rather, such programs often delay first intercourse, reduce the frequency of sex and reduce the number of sexual partners.¹
- In recent years, the decline of teen pregnancy rates has been attributed in part to an increase in abstinence among adolescents, but to a greater degree to an increase in contraceptive use.²

Minnesotans Support Comprehensive Sexuality Education

- Seven out of 10 Minnesota adults believe that sexuality education should include both abstinence and contraception.³
- Nine out of 10 Minnesotans support comprehensive sexuality education in high schools; eight out of 10 Minnesotans support comprehensive sexuality education in junior high schools.³
- Eight out of 10 Minnesota parents reject the idea that teaching both abstinence and contraception encourages young people to have sex.³

Abstinence-Only-Until-Marriage Education Does NOT Work

- Abstinence-only-until-marriage education offers abstinence as the only option, does not include any information on contraception or prevention of STIs, relies on scare tactics and overstates contraception failure rates, and does not provide young people with information they will need for healthy lives.
- The only research on abstinence-only-until-marriage education programs found an increased number of young people had sex and that fewer used contraception.⁴
- Abstinence-only-until-marriage education imposes only one set of values as morally correct regardless of family composition, cultural experience, religious beliefs and sexual orientation.
- Abstinence-only-until-marriage education can shame and fail to address young people who have sexually abused or sexually assaulted.
- Research from the Texas Department of Health found abstinence-only sex education programs have had little impact on Texas teenagers' behavior.⁵
